

**IN THE CLAIMS:**

This listing of claims will replace all prior versions and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A method for presenting data relating to at least one individualized instructional program, the method comprising:
  - ~~receiving~~ generating first filtering criteria utilizing user attributes;
  - ~~accessing at least one database relating to the at least one individualized instructional program, the at least one database comprising modules;~~
  - ~~determining a start table and an end table in the at least one database;~~
  - ~~determining if the start table and the end table are related;~~
  - ~~if the start table and the end table are related, determining if the end table contains unprocessed items;~~
  - ~~if the end table does not contain unprocessed items, identifying data from the end table that meets the filtering criteria;~~
  - generating second filtering criteria based on the first filtering criteria, the second filtering criteria comprising:
    - at least one primary document in the at least one database, the at least one primary document generated by an intra-module filter accessing information only within one module;
    - at least one secondary document in the at least one database, the at least one secondary document generated by an inter-module filter accessing information in at least two modules; and
  - continuously adapting generating the first and second filtering criteria to fit an adapting user profile.

2. (Currently Amended) The method of claim 1, wherein ~~determining if the start table and the end table are related~~ the generating of the second filtering criteria further comprises ~~determining if the start table and the end table are~~ first filtering criteria is closely related to the information in the at least one module being searched, and if so, designating a high value factor.

3. (Currently Amended) The method of claim 2, wherein if the ~~start table and the end table~~ first filtering criteria and the information in the at least one module being searched are not closely related, determining if the first filtering criteria and the information in the at least one module being searched ~~start table and the end table~~ are loosely related, and if so, designating a low value factor.

4. (Currently Amended) The method of claim 2, wherein if the ~~end table~~ information in the at least one module contains ~~unprocessed items~~ new content:

selecting another item from the information in the at least one module ~~end table~~;  
adjusting the filtering criteria;  
applying the generated first filtering criteria;  
determining if at least one preclusive condition has been met; and  
if at least one preclusive condition has been met, designating the item as not meeting the first filtering criteria.

5. (Previously Presented) The method of claim 4, wherein if at least one preclusive condition has not been met, determining if a degree is higher than a specified threshold.

6. (Currently Amended) The method of claim 5, wherein if the degree is determined to be higher than the specified threshold, an item is considered to meet the first filtering criteria.

7. (Currently Amended) The method of claim 5, wherein if the degree is not higher than the specified threshold, determining if ~~there~~ at least one table exists deeper in a history that has not been processed.

8. (Previously Presented) The method of claim 7, wherein if at least one table does not exist deeper in the history that has not been processed, the table is designated as not meeting the first filtering criteria.

9. (Currently Amended) The method of claim 7, wherein if at least one table exists deeper in the history that has not been processed, the table is designated as a new table with new content, and from which primary or secondary documents have not yet been generated ~~start~~ table.

10-11. (Cancelled)

12. (Currently Amended) The method of claim [10] 1, wherein the first filtering criteria related to user attributes [data] comprises information from at least one of: education; careers; and personal attributes.

13. (Currently Amended) The method of claim [10], further comprising utilizing a graphical user interface that adapts to a user profile.

14. (Currently Amended) The method of claim [10] 1, further comprising extracting an ~~accurate user profile~~ the first filtering criteria by capturing at least one user reaction to at least one self-assessment instrument.

15. (Cancelled)

16. (Currently Amended) The method of claim [10] 1, wherein the ~~user profile~~ first filtering criteria is created by capturing and processing user reactions.

17. (Currently Amended) The method of claim [10] 1, further comprising discovering intersections among at least two instruments and assigning meaning to the intersections.

18. (Currently Amended) The method of claim [10] 1, wherein the at least one database is

an updatable database.

19. (Currently Amended) The method of claim [10] 1, wherein data in at least two databases is integrated into a database ~~comprising to produce~~ a dynamic intersection of options.

20. (Currently Amended) The method of claim [10] 1, wherein the individualized instruction program plan comprises information from more than one institution.

21. The method of claim 20, wherein the individualized instruction program comprises information available on the Internet.

22 – 24. (Cancelled)

25. (Currently Amended) ~~A method for presenting data, the method comprising: receiving past user profile information; organizing the past user profile information into at least one norm user profile database; and comparing current user profile information with information in the at least one norm user profile database; if the current user profile information meets criteria of at least one norm user profile, customizing display information on a user interface to match the at least one norm user profile; and if the current user profile information does not meet criteria of at least one norm user profile~~ The method of claim 1, further comprising customizing [the] display information to match [the] current user profile information.

26. (Currently Amended) The method of claim 25, wherein customizing the display information to match the current user profile information comprises a personal agent factor.

27. (Currently Amended) The method of claim 26, wherein the personal agent factor comprises: organizing and reporting customized user profile information; and assigning display information to customized user profile information.

28. (Currently Amended) The method of claim 25, wherein the [data] customized user profile information is related to an individual instruction program.

29. (Withdrawn)

30. (Currently Amended) A system for presenting data relating to at least one individualized instructional program, the system comprising:

an interface program for receiving generating first filtering criteria relating to user attributes;

at least one database relating to the at least one individualized instructional program, the at least one database comprising modules;

a start table and an end table in the at least one database;

a program for determining if the start table and the end table are related;

if the start table and the end table are related, a program for determining if the end table contains unprocessed items;

if the end table does not contain unprocessed items, a program for identifying data from the end table that meets the filtering criteria;

a program for generating second filtering criteria, the second filtering criteria based on the first filtering criteria and comprising:

at least one primary document in the at least one database, the at least one primary document generated by an intra-module filter accessing information only within one module;

at least one secondary document in the at least one database, the at least one secondary document generated by an inter-module filter accessing information in at least two modules; and

a program for continuously adapting generating the first and second filtering criteria to fit an adapting user profile.

31. (Currently Amended) The system of claim 30, wherein the program for generating the second filtering criteria ~~determining if the start table and the end table are related~~ further comprises a program for determining if the ~~start table and the end table~~ first filtering criteria and the information in the at least one module being searched are closely related, and if so, a program for designating a high value factor.

32. (Currently Amended) The system of claim 31, further comprising a program for determining if the ~~start table and the end table~~ first filtering criteria and the information in the at least one module being searched are loosely related, and if so, a program for designating a low value factor.

33. (Currently Amended) The system of claim 32, further comprising a program for: ~~selecting another item from the end table; adjusting the~~ applying the generated first filtering criteria; determining if at least one preclusive condition has been met; and if at least one preclusive condition has been met, designating the item as not meeting the first filtering criteria.

34. (Previously Presented) The system of claim 33, further comprising a program for determining if a degree is higher than a specified threshold.

35. (Previously Presented) The system of claim 33, further comprising a program for determining if there at least one table exists deeper in history that has not been processed.

36. (Cancelled)

37. (Currently Amended) The system of claim [36] 30, wherein at least one key personal attribute is discovered and added to the first filtering criteria.

38. (Currently Amended) The system of claim [36] 30, wherein the [data] first filtering criteria comprises information from at least one of: education; careers; and personal attributes.

39. (Currently Amended) The system of claim [36] 30, further comprising an interface that adapts to a user profile.

40. (Currently Amended) The system of claim [36] 30, further comprising a program for

extracting an accurate user profile by capturing at least one user reaction to at least one question.

41. (Currently Amended) The system of claim [36] 30, wherein [the] data responsive to the first filtering criteria has been filtered across different types of data.

42. (Currently Amended) ~~A system for presenting data, the method comprising: a program for organizing past user profile information and storing it in at least one norm user profile information database; a program for comparing current user profile information with information in the at least one norm user profile database; and a program for determining if the current user profile information meets criteria of at least one norm user profile, and if so, The system of claim 30, further comprising a program for customizing display information on a user interface to match the at least one norm user profile.~~

43. (Previously Presented) The system of claim 42, further comprising: if the current user profile information does not meet criteria of at least one norm user profile, a program for customizing the display information to match the current user profile information.

44. (Withdrawn)
